A process for at least one of inhibiting activity, reducing size and destroying growth of at least one of a sebaceous oil gland and tissue feeding the sebaceous oil gland in mammalian skin, comprising: selecting at least one of a photoactive agent and a photosensitizing agent, the agent having an average diameter enabling the agent to penetrate a sebaceous oil gland duct, the agent having an electromagnetic radiation absorption characteristic enabling the agent to absorb at least a first wavelength of electromagnetic radiation from an electromagnetic radiation source, applying the agent to at least one of the gland and tissue, exposing the agent to electromagnetic radiation comprising at least the first wavelength of electromagnetic radiation, whereby the agent absorbs the first wavelength of electromagnetic radiation.

8. The process of claim 7, comprising the step of exposing at least one of the gland and tissue to at least one external enzyme.

9. The process of claim 7, comprising the step of exposing at least one of the gland and tissue to ultrasound.
